Comparison of Approac	hes
Strength-Based, Solution-Focused Approach	Traditional Approach
1. Identify what the client wants.	1. Diagnose the problem.
2. Let the client tell you who he or she is.	2. Gather all available information in order to classify the client.
3. The client is the "expert" about his or her life.	3. The professional is the expert.
<ol> <li>Identify client strengths that can be used to promote client goals.</li> </ol>	4. Identify the web of causality that is supporting the client problem.
<ol><li>The professional collaborates with the client to help the client identify ways to accomplish goals.</li></ol>	<ol><li>The professional develops a service plan that the client is expected to follow in order to achieve the case goals.</li></ol>
<ol><li>The unfolding of the plan may not be step-by-step, but may emerge in ways best-suited to client needs and style.</li></ol>	6. The plan is expected to be implemented in a logical, step-by-step way.

Developmental Challenges of Children in Child

Welfare

• 40% are born premature and/or with low birth weight;

• Experience developmental delay at 4 to 5 times the rate of the general population;

• Have substantially lower grades and test scores;

• Have more school absences and grade repetitions; and

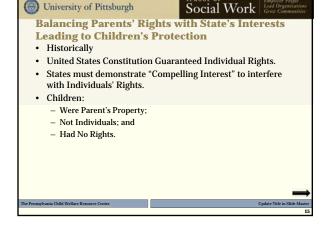

• Have an increased risk of special education needs.

Developmental Challenges of Children in Child Welfare, (cont'd)

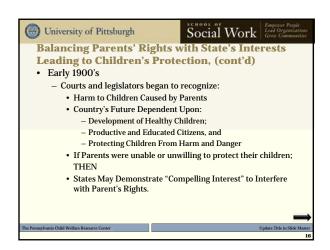

Poverty is the single best predictor of child abuse and neglect.

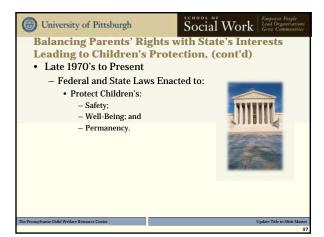

Children who live in families with annual incomes of less than \$15,000 are 22 times more likely to be abused or neglected than those with annual incomes of \$20,000 or more.

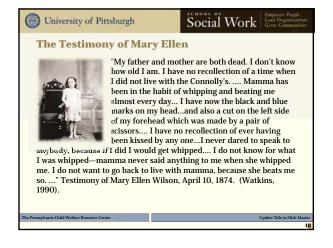

A 2006 study found that more than half of the children in foster care were identified as having birth families "who had difficulty meeting their basic needs at the time of the investigation.
